

Week 3 CSS Personal Website Assignment

Student Assignment Guide

Update the supplied multi-page personal website with one shared external stylesheet. Begin during the seminar and submit the completed project within 24 to 48 hours. Your final result must meet the exact baseline specifications below; optional personalisation may be added only after the baseline works correctly.

Learning goals

- Connect one external stylesheet to several HTML pages.
- Use element, class, ID, descendant, combined-class and pseudo-class selectors purposefully.
- Apply inheritance, specificity and source order when several declarations could affect an element.
- Control spacing and visible size with the CSS box model.
- Style navigation, images, tables, lists and forms consistently.

Files and submission

Work inside the supplied starter folder. Submit one ZIP file containing the complete folder. Do not submit separate files.

```
personal-website/  
  index.html  
  education.html  
  contact.html  
  css/styles.css  
  images/profile.png
```

The pages already contain semantic HTML. Preserve the existing headings, labels, table structure, alternative text and navigation relationships.

Required design values

Item	Required value
Page background	#F4F7FA
Main text	#1F2937
Headings	#1E3A5F
Accent	#2F6FED
Button hover	#1D4ED8
Borders	#CBD5E1
Alternate table row	#EAF0F6
Font	Arial, sans-serif
Body width	90%; maximum 1100px

Item	Required value
Standard radius	6px; cards may use 10px

Task 1 Connect and normalise the pages

- Confirm that all three pages use `css/styles.css` through `<link rel="stylesheet" href="css/styles.css">`.
- Apply `box-sizing: border-box` to every element.
- Give `html` and `body` the required page background.
- Set `body` to 90% width, a maximum width of 1100px, and centre it with automatic left and right margins.
- Set the shared font, text colour and a line height of 1.6.

Task 2 Style navigation and content cards

- Remove the default bullets and padding from `.nav-list`.
- Display navigation items in one centred row with a 10px gap; wrapping is allowed on narrow screens.
- Give navigation links 8px vertical and 14px horizontal padding.
- Use the accent colour and white text for hover, keyboard focus and the current page.
- Give `.card` and `.profile-card` a white background, 24px padding, a 1px border and a 10px radius.
- Use `.card.featured` or `.profile-card.featured` to give an element with both classes a 5px accent-coloured top border.

Task 3 Style the profile image and horizontal rule

- Set `.profile-picture` to 200px by 200px.
- Make it circular with `border-radius: 50%` and use `object-fit: cover`.
- On `:hover`, increase both dimensions to 220px.
- Use a 0.25-second transition so the change is not abrupt.
- Set `hr` to 60% width, centre it, remove the default border and add a 4px dashed top border in `#2F6FED`.

Task 4 Style lists

- Use square markers for `.interest-list` and circle markers for `.skills-list`.
- Use 28px left padding and 7px spacing below each list item.
- Keep navigation styling separate from content-list styling.

Task 5 Style the Education table

- Place horizontal overflow on `.table-wrapper`, not on the table.
- Set the table width to 100% and collapse borders.
- Give cells 12px padding and a 1px solid `#CBD5E1` border.
- Use `#1E3A5F` with white text for the header.
- Use `#EAF0F6` for even rows and `#DDE8F7` when a body row is hovered.
- Keep the caption visible and left aligned.

Task 6 Style the Contact form

- Display labels as blocks and make them bold.
- Give inputs, selects and textareas 100% width, 10px padding, a 1px border and a 6px radius.
- On focus, change the border to `#2F6FED` and show a 3px `#BFDDBE` outline.
- Give the button 10px by 18px padding, the accent background, white text and a 6px radius.
- Use `#1D4ED8` for the button hover and focus states.

Required selector evidence

Selector type	Example in this project
Element	body, h1, table or button
Class	.profile-picture
ID	#name or another existing unique ID
Descendant	.nav-list a
Combined classes	.profile-card.featured
Pseudo-class	:hover and :focus
Attribute	a[aria-current="page"]

An ID selector must have a meaningful visual role. Do not add an unused or duplicate rule merely to satisfy the checklist. For example, `#message { min-height: 140px; }` is acceptable.

Work sequence

When	Expected progress
During seminar	Connect the stylesheet; complete shared page, navigation, card, horizontal-rule and profile-image styling; begin the table or form.
After seminar	Complete tables, lists, form states, responsive check and final testing.
Within 24-48 hours	Submit the complete ZIP folder through the course submission area.

Final checks

- All pages load the same external stylesheet.
- No inline CSS and no `<style>` element are used.
- The image is circular and grows on hover.
- Keyboard focus is visible on links and form controls.
- The table remains usable in a narrow window.
- All navigation links and image paths work after extraction.
- The ZIP contains the project folder rather than loose files.
